

WHAT IS PEMF?

Pulsed Electromagnetic Field technology ("PEMF") is a general wellness modality with a variety of benefits. While the concept seems modern, the use of electromagnetic fields for wellness actually dates back to the 19th century and has a rich history of scientific discovery.

"Our entire biological system, the brain, and the earth itself work on the same frequencies."

- Nikola Tesla

Pulse PEMF systems utilize sophisticated generators and a variety of application accessories to introduce electromagnetic fields (note: this is not an electric current), through the clothing and skin, and into the body.

The pulsing field introduces an electromagnetic charge to the cells, stimulating and exercising them. The cells use the supplemental energy from PEMF to better perform their many jobs—re-laxing the body to assist with muscle fatigue, providing full-body energy, and enhancing the natural recovery process.

PEMF capitalizes on the intelligence and holistic nature of the body. Rather than treating or addressing injuries or illnesses, PEMF provides a raw material (electromagnetic energy!) crucial to the body's ability to heal and regulate itself.

It's because of LIGHTNING that the earth is able to sustain life. It's because of ELECTRICAL CHARGES that the body is able to heal itself.
